YASH CHAUDHARI

Software Engineer

Dallas, TX | (689) 250-9410 | Jermpro0@gmail.com | github.com/mezeru | linkedin.com/in/yashnchaudhari | Portfolio: ruizo.is-a.dev

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building scalable full-stack and backend systems using Java, Spring Boot, React.js, Next.js, and Kafka-based microservices. Experienced integrating LLM-powered automation (Gemini API) into production workflows, including an email-parsing pipeline that eliminated manual data entry for enterprise operations. Proven track record delivering reliable, cloud-native applications for enterprise and healthcare platforms using AWS, Docker, and Agile methodologies.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Ruby, JavaScript, TypeScript, React.js, Next.js, Node.js, Express.js, Svelte, Fastify

APIs & Architecture: REST APIs, GraphQL, Microservices Architecture

Real-Time & Messaging: Apache Kafka, Redis, WebSockets

Cloud & DevOps: AWS (EC2, S3, Lambda), Azure, Docker, Jenkins, CI/CD Pipelines

Databases: PostgreSQL, Oracle, MongoDB, SQL & NoSQL, Query Optimization

AI / LLM Integration: Gemini API, Prompt Engineering

Frontend & Visualization: Redux, Chart.js, Responsive UI Design, Dashboard Development

Testing & Tools: Unit/Integration/API Testing, Git, Jira, Agile/Scrum, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer | Incedo Inc. — Verizon | Dallas, TX *Jun 2024 – Present*

- Designed an LLM-powered email-parsing pipeline that extracted maintenance schedules from operational emails, converted them into structured JSON, and auto-created maintenance requests via internal REST APIs, eliminating manual data entry for the maintenance team.
- Built and maintained enterprise-scale full-stack applications using Java, Spring Boot, React.js, Next.js, and GraphQL, supporting mission-critical operational workflows across multiple Verizon business units.
- Designed RESTful and GraphQL APIs in Java/Spring Boot to enable scalable, low-latency communication between distributed microservices.
- Built event-driven microservices with Kafka and Redis to support asynchronous processing and reliable cross-service communication.
- Optimized frontend rendering and API response handling, reducing page load and interaction latency by 80%. Built real-time operational dashboards with React.js and Chart.js to improve stakeholder visibility into system and business metrics.
- Built and maintained CI/CD pipelines with Docker and Jenkins, shortening release cycles and reducing manual deployment steps.

Software Engineer — Part-Time | Florida Space Institute | Orlando, FL *Dec 2022 – Mar 2024*

- Designed and built a full-stack research collaboration platform using React.js, Node.js, Fastify, and MongoDB for operational data management, replacing manual workflows.
- Designed and optimized MongoDB schemas and queries, reducing response times for large research datasets.
- Built automated Python data-processing pipelines and containerized services with Docker on AWS EC2 for consistent, repeatable deployments.

Full Stack Developer | Medblocks | New Delhi, India *Sep 2021 – Jun 2022*

- Built healthcare IT applications using Svelte, Node.js, and MongoDB, implementing REST APIs aligned with FHIR interoperability standards.
- Built backend systems supporting national-scale healthcare integration under India's Ayushman Bharat Digital Mission (ABDM), connecting 1M+ users to national digital health infrastructure.
- Collaborated with cross-functional teams in Agile Scrum to deliver features meeting product and compliance requirements.

EDUCATION

M.S., Computer Science — University of Central Florida, Orlando, FL | GPA: 3.95/4.0 *Aug 2022 – May 2024*

B.Tech, Computer Science & Engineering — National Institute of Technology Delhi, India *Aug 2018 – May 2022*
